

HIRING INTELLIGENCE PLATFORM

VeriHire AI

Rank by capability, not keywords. Evidence-backed candidate ranking powered by GitHub, LeetCode, and LLM verification.

Live: vire-hire.vercel.app · virehire-k56f.onrender.com

Repository: github.com/Narayan1006/VireHire · **Version:** 1.0 · May 2026

Executive Summary

VeriHire AI replaces keyword-matching ATS systems with evidence-backed hiring intelligence.

Traditional Applicant Tracking Systems ask: *Does this resume contain the right words?* VeriHire asks: *Can this person actually do the job?*

Recruiters upload a candidate CSV, paste a job description, and receive a ranked shortlist where every score is backed by verified GitHub repositories, LeetCode activity, and AI-generated recruiter summaries.

Key Capabilities

- **CSV dataset ingestion** — recruiters upload their own candidate pool (up to 50 MB)
- **Semantic matching** — ChromaDB + sentence-transformers retrieve top candidates by meaning, not keywords
- **Evidence verification** — GitHub, LeetCode, and Codeforces APIs validate claimed skills
- **LLM reasoning** — Groq (Llama 3.3 70B) generates evidence-only hiring summaries
- **Verdict system** — automatic HIRE / REVIEW / REJECT classification with export

02

The Problem & Solution

✗ Traditional ATS

Keyword density matching. Inflated resumes pass filters. No verification of GitHub or coding ability. Recruiters manually review hundreds of unqualified candidates.

✓ VeriHire AI

Claims extracted and verified against live API signals. Ranked by proven capability. Risk flags surface skill inflation and AI-generated code patterns.

Recruiter Workflow

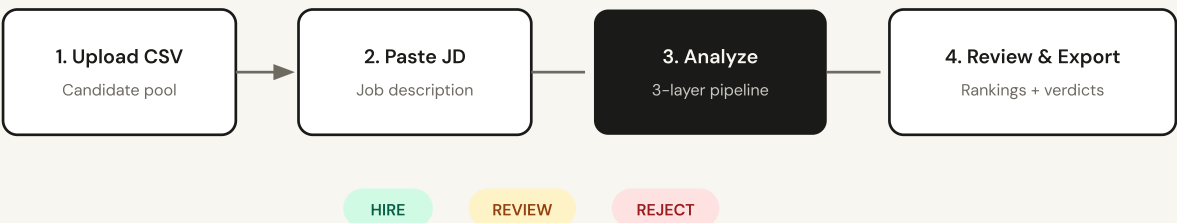

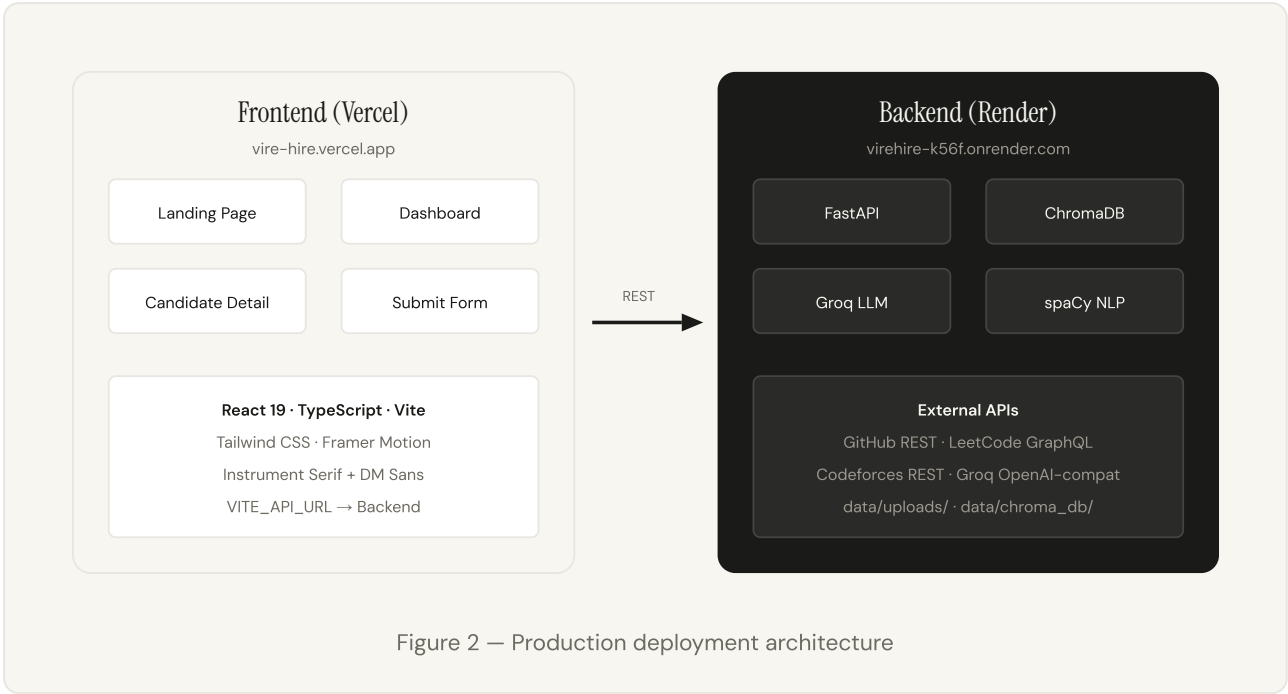

Figure 1 — End-to-end recruiter workflow on the VeriHire dashboard

03

System Architecture

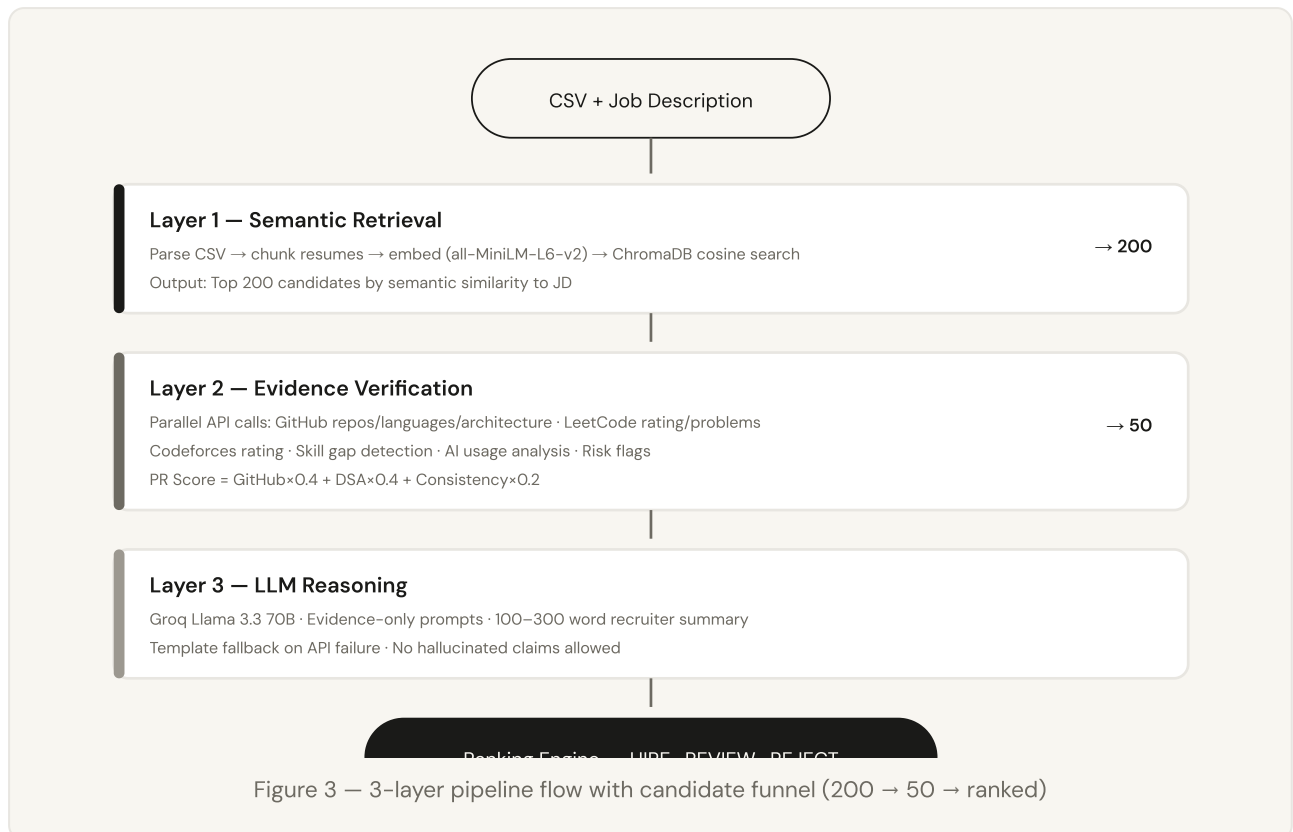

Monorepo deployed as two services: React frontend on Vercel, FastAPI backend on Render.

04

The 3-Layer AI Pipeline

Every ranking job runs through three sequential intelligence layers, orchestrated by PipelineOrchestrator.

05

Scoring & Verdict Logic

PR Score (Performance Rating)

$$\text{PR Score} = \text{GitHub} \times 0.4 + \text{DSA} \times 0.4 + \text{Consistency} \times 0.2$$

GitHub score (0–100) reflects repo quality, architecture, language diversity, and activity. DSA score (0–100) comes from LeetCode/Codeforces ratings and problem-solving patterns. Consistency measures regular coding activity over time.

Final Composite Score

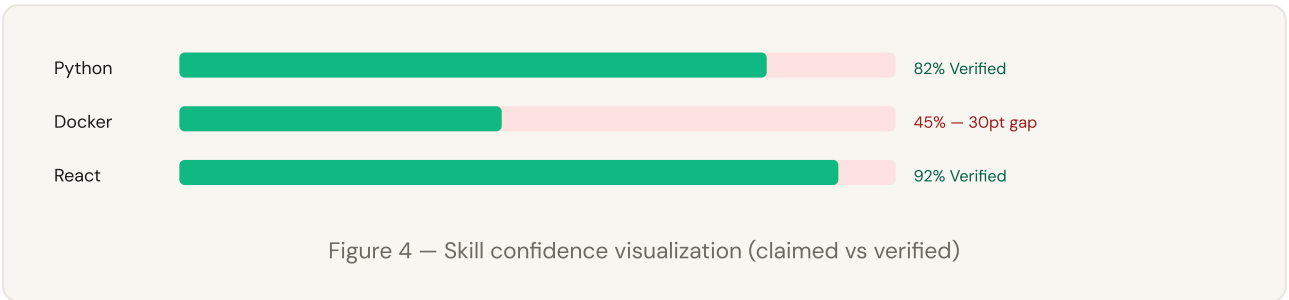

$$\text{Final} = \text{Layer1} \times 0.2 + \text{Layer2} \times 0.6 + \text{Layer3} \times 0.2$$

Verdict Thresholds

Verdict	PR Score	Meaning	Color
HIRE	≥ 80	Strong verified capability — recommend interview	Green
REVIEW	60 – 79	Mixed signals — technical interview required	Amber
REJECT	< 60	Significant gaps between claims and evidence	Red

Skill Confidence Heatmap

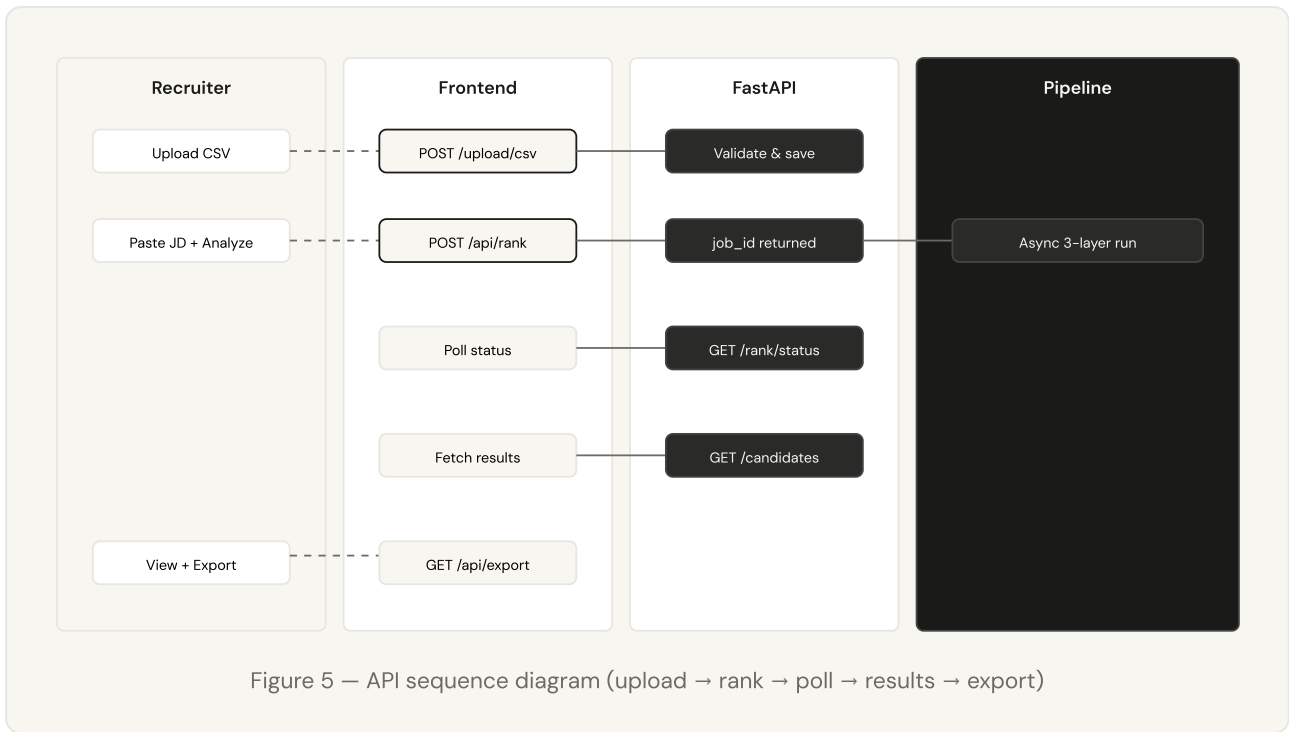

Each candidate profile shows claimed vs verified proficiency per skill. Green bars indicate verified skills; red overlay shows inflated or unverified claims.

06

API Request Flow

Sequence of API calls from the recruiter dashboard to ranked results.

API Endpoints

Method	Path	Description
POST	/api/upload/csv	Upload recruiter candidate CSV
POST	/api/rank	Trigger 3-layer ranking pipeline
GET	/api/rank/{id}/status	Poll pipeline job status
GET	/api/candidates	List ranked candidates (filterable)
GET	/api/candidates/{id}	Full candidate profile
GET	/api/stats	Dashboard statistics
GET	/api/export	Export CSV or JSON results
GET	/api/health	Service health check

Frontend Application

Light editorial aesthetic — Instrument Serif headings, DM Sans body, warm off-white (#f8f6f1) palette.

Route	Page	Key Features
/	Landing	Hero video, storytelling sections 01–03, animated stats, email CTA
/dashboard	Recruiter Dashboard	CSV upload, JD input, stats cards, ranking table, top candidate spotlight
/candidate/:id	Candidate Detail	Skill heatmap, GitHub evidence, LeetCode stats, risk flags, LLM summary
/candidate	Candidate Submit	Self-service profile submission (hidden — footer link only)

Dashboard Components

DatasetUpload

Drag-and-drop CSV upload with validation feedback and row counts.

JDInput

Job description textarea triggering the ranking pipeline.

CandidateTable

Sortable rankings with verdict pills, click-through to detail view.

TopCandidate

Spotlight card with skill bars and LLM summary excerpt.

Design System

- Background: #f8f6f1 · Text: #1a1a18 · Muted: #6d6a62 · Border: #e8e6e1
- Framer Motion: staggered fade-up, scroll-triggered sections, count-up stats
- Custom cursor (dot + ring) and grain texture overlay on desktop
- Verdict colors: green HIRE · amber REVIEW · red REJECT

Technology Stack & Deployment

Layer	Technologies
Frontend	React 19, TypeScript, Vite 8, Tailwind CSS 4, Framer Motion, Lucide React, React Router v7
Backend	FastAPI, Uvicorn, Pydantic v2, pandas, spaCy, sentence-transformers
Vector DB	ChromaDB (persistent embeddings, cosine similarity)
LLM	Groq API — Llama 3.3 70B Versatile
Evidence APIs	GitHub REST, LeetCode GraphQL, Codeforces REST
Deploy	Vercel (frontend) · Render (backend) · GitHub CI via auto-deploy

Environment Variables

Variable	Service	Purpose
VITE_API_URL	Vercel	Backend base URL for frontend API calls
GROQ_API_KEY	Render	Layer 3 LLM reasoning
GITHUB_TOKEN	Render	GitHub evidence API (higher rate limits)
CORS_ORIGINS	Render	Allowed frontend origins
CHROMADB_PATH	Render	Vector database persistence path

Repository Structure

```
VireHire/

├─ backend/app/integrations/ # GitHub, LeetCode, Groq clients
├─ backend/data/uploads/ # Recruiter CSV uploads
├─ frontend/src/pages/ # Landing, Dashboard, Detail
├─ frontend/src/components/ # UI sections
└─ docs/ # This document
```

09

Summary

VeriHire AI transforms hiring from keyword matching to evidence-backed intelligence. Recruiters upload real candidate data, define the role, and receive verified rankings in minutes — not days.
